

SUPERIOR FILTRATION TECHNOLOGY

- 1 Water enters the top of the Everpure filter cartridge.
- 2 Our exclusive precoat **Micro-Pure** technology coats the filter membrane, offering long-lasting superior filtration with consistent water pressure.
- 3 The openings in the **Micro-Pure** layer are so small that any particles .5 micron and larger are removed, including harmful cysts and asbestos fibers.
NSF/ANSI Standard 53 Certified to reduce cysts such as *Cryptosporidium* and *Giardia* by mechanical means.
- 4 Clean, healthful water is delivered straight to your tap, or dedicated filter faucet, to enjoy on demand.

What makes the Everpure silver canister so unique?

A heavy duty aluminum cartridge housing protects the Everpure system from splitting or bursting. It's lined with a food-grade polymer that prevents the filtered water from coming into contact with the aluminum, delivering commercial grade water at home.

PENTAIR | WATER YOU CAN TRUST®

INSIST ON EVERPURE, EVERY TIME

When it comes time to replace your filtration cartridge, it may be tempting to buy a less expensive replacement that claims to be “just as good” as Everpure.

Don't fall into the temptation.
Here's why...

PROTECT YOUR FAMILY WITH AUTHENTIC EVERPURE PRODUCTS

EVERPURE

Everpure Technology

When you purchase an Everpure drinking water system, you can rest assured that it is **unmatched in the industry** for removing impurities and unwanted substances from drinking water.

Durable Filtration

Our filter membranes have more than **five times** the filtering surface area of carbon filters, so it's like packing **nearly six filters into one canister**. Unlike solid carbon block filtration systems, our accordion-folded filter membrane [pictured right] is covered with a very fine activated carbon coating, Micro-Pure.

Made in the USA

Since 1933, Everpure has proudly manufactured its products here in the United States. Our Hanover Park, Illinois facility is also **zero waste** - because it recycles or reuses all scrap materials that would normally be sent to landfills.

Reliable Solutions

Everpure systems are rigorously tested to uphold **NSF International** and **WQA certifications** to ensure the water you're enjoying is free of lead, off-tastes, color, odor, and other unwanted impurities.

Sustainable

Everpure systems are **easily recyclable** through our nationwide program with TerraCycle. So not only will you enjoy the water you drink, but you can feel good about it too.

IMITATORS

Voids Certification

When you use a counterfeit replacement cartridge in an Everpure system - you're no longer guaranteed the same protections of the NSF certification. Visit nsf.org for more information.

Less than the Best

We've been committed to providing clean, quality water you can trust. Other filter companies have **unsuccessfully tried to imitate our exclusive technology**, but knowledgeable consumers demand genuine Everpure filters for **superior performance**.

Counterfeit Technology

Inferior filter cartridges are manufactured to fit into the head of another filter system brand and are often misrepresented as being “the same thing”. These counterfeits offer no assurance of performance, which can **put your family at greater risk**.

Less Efficient Removal

Only Everpure carries its exclusive Micro-Pure activated carbon technology which filters contaminants down to .5 micron in size, particles not even the human eye can see, like **cysts** and **asbestos**.
